

13 said light source along said optical axis.

1 2. (Original) The light collection system of claim 1 wherein:
2 said system further comprises a spherical lens that directs light toward said aperture.

1 3. (Original) The light collection system of claim 1 wherein:
2 said light source comprises a planer filament.

1 4. (Original) The light collection system of claim 1 wherein:
2 a height of a face of said planar filament is approximately equal to a width of a face
3 of said planar filament.

1 5. (Original) The light collection system of claim 2 wherein:
2 said light source comprises a planer filament.

1 6. (Original) The light collection system of claim 2 wherein:
2 a height of a face of said planar filament is approximately equal to a width of a face
3 of said planar filament.
